

The sculpture-table that challenges gravity

100% Italian design

Edilbi Suisse Sa officially presents his new design table, a concept for high standing meeting room.

It's an out-of-ordinary meeting table designed by Fabio Gianoli.

It arises from a ground vortex and stretches itself out reaching 5 metres overhang, while becoming thinner up to its far end.

It's been defined by estimators *“A table with a strong nature, almost a sculpture... able to amaze also most demanding visitors.”*

The inspiration

The concept's inspiration origins from a little and simple object with which, likely, many of us played during childhood: **the spinning top**.

“Playing” with balance, challenging gravity to create a product that stands out from the more classical meeting tables. This was the real dare.

The structure

The shape we can appreciate has been finalized after a long and laborious process of single thermoformed moulds, subsequently welded together to make **a final unique shape of 5x1,6 metres**.

Its bending load resistance is guaranteed thanks to an iron frame positioned inside the table and properly fixed to the ground.

The **harmonic shape** of the table gives a sense of **simple and elegant lightness**.

The material

The material chosen for the table realized is **KRION® Solid Surface, white colour**. A **malleable material** that can adapt to any shape and, in the meantime, it is also **resistant** to great stress level. In addition this material has considerable antibacterial characteristics.

The main viewpoints

Fabio Gianoli, designer

*“As a designer I believe in art of **making unforgettable simply things**. This project gave me the chance... and I might have succeeded.”*

Claudio Bianchi, Edilbi Suisse Sa founder and owner

“We are very proud of this top gamma product made by Edilbi Suisse Sa for the Swiss headquarter of an important pharmaceutical company. Our table, placed in the meeting room, turns into a sculpture that cleaves the air giving new shape to this area.”

The awards

This table has been awarded by **Porcelanosa Grupo** as one of the best realized projects within the International Competition **X Architecture & Interior Design Awards 2017**.
